

### 1. SCOPE

This specification is applied to the ceramics resonator used for the clock Oscillation of Microprocessor.

## 2. MODEL NAME

| Part Name | Customer's Part number | Drawing No. |
|-----------|------------------------|-------------|
| ZTA20.0MX |                        |             |
| ZTT20.0MX |                        |             |

### 3. **DIMENSIONS**

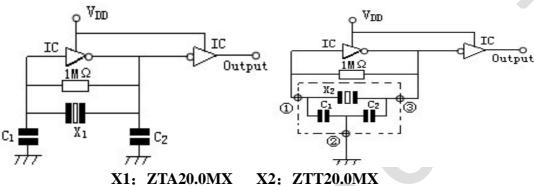

MARK 1: ZTA20.0MX MARK 2: ZTT20.0MX

#### 4. TEST CIRCUIT

Parts shall be measured under a condition (Temp.:3~35°C.Hum.:45~85%) unless any Necessity to measure under a standard condition (Temp.:20±2°C.Humi.:65±5%) is occurred.

X1: ZTA20.0MX

C1=C2=15PF IC: 1/674HCU04

VDD=+5V

### 5. ELECTRICAL CHARACTERISTICS

|     | Item                                                     | Requirements               |  |
|-----|----------------------------------------------------------|----------------------------|--|
| 5-1 | Frequency Accuracy                                       | 20.0M±0.5%                 |  |
| 5-2 | Resonant Impedance                                       | 35 Ω max                   |  |
| 5-3 | Operating Temperature Range<br>Storage Temperature Range | -20 to +80<br>-30 to +85   |  |
| 5-4 | Stability Temperature                                    | ±0.3% max. (−20−+80°C)     |  |
| 5-5 | Withstanding Voltage                                     | DC 100V. (less than 5 sec) |  |
| 5-6 | Insulation Resistance                                    | 100 M Ω min (DC 10V)       |  |
| 5-7 | Aging for 10 Years                                       | ±0.5±% max                 |  |

#### 6.PHYSICAL AND ENVIRONMENTAL CHARCTERISTICS

|     | Test Item      | Condition of Test                                                                         | Requirements                          |
|-----|----------------|-------------------------------------------------------------------------------------------|---------------------------------------|
| 6-1 | Lead strength  | Force of 1 Kg is applied for 10 second to each lead in axial direction.                   | No mechanical damage and the measured |
| 0-1 | Lead Bending   | Firmed the terminal up to 2mm. Resonator lead                                             | values shall meet Item                |
|     |                | shall be subjected to withstand against 90° bending                                       | 5.                                    |
|     |                | its stem. This operation shall be done toward both                                        |                                       |
|     | Solder ability | directions.  The terminals of the Resonator shall be immersion   The solder shall for coa |                                       |
| 6-2 | Solder ability | in a soldering bath $(230\pm5^{\circ}\text{C})$ for $3\pm0.5\text{sec.}$ (refer to        | at least 95% of the                   |
| 0-2 |                | Mil-STD-202E-208C)                                                                        | terminal.                             |
|     | Vibration      | Resonator shall be measured after being                                                   |                                       |
| 6-3 |                | Applied vibration as below.                                                               |                                       |
|     |                | Vibration Freq: 10-55Hz                                                                   |                                       |
|     |                | Amplitude: 1.5mm                                                                          |                                       |
|     |                | Directions: 3 axial directions                                                            |                                       |
|     |                | Time: 2 hour/each direction                                                               | The measured values                   |
|     | Random Drop    | Resonator shall be measured after 3 times Shall meet table 1                              |                                       |
| 6-4 |                | Random dropping from the height of 1m.                                                    |                                       |
|     |                | Concrete floor                                                                            |                                       |
|     | Resistance to  | Dipped in (350±10°C) measured solder to a point                                           |                                       |
| 6-5 | Soldering      | 1.5mm from Resonator body for 3±0.5 sec or dipped                                         |                                       |
|     | Heat           | in (260±5°C) melted solder for 10±1 sec. Resonator                                        |                                       |
|     |                | shall be measured after being placed in natural                                           |                                       |
|     |                | condition for 1 hour.                                                                     |                                       |

## 6. PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

|     | Test Item                   | Condition of Test                                                                      | Requirements        |  |
|-----|-----------------------------|----------------------------------------------------------------------------------------|---------------------|--|
| 6-6 | Humidity                    | After being placed in a chamber (Humi: 90-95%RH Temp:40±2°C) for 96 hours              |                     |  |
|     |                             | Resonator shall be measured after placed in natural condition for 1 hour.              |                     |  |
| 6-7 | Life Test<br>(High          | After being placed in a chamber 85±2°C for 96 hours, Resonator shall be measured after | The measured values |  |
|     | temperature)                | being placed in natural condition for 1 hour.                                          | Shall meet table l  |  |
| 6-8 | Life Test (Low temperature) | Stored in a chamber (Temp:-20±2°C) for 1000 hours, Resonator shall be measured         |                     |  |
|     |                             | after being placed in natural condition for 1 hour.                                    |                     |  |
| 6-9 | Thermal shock               | After temperature cycling of -20°C (30 min) to +80°C (30min) was performed 5 times the |                     |  |
|     |                             | Resonator shall be measured after being placed in natural condition for 1 hour.        |                     |  |

# Table 1

| Item               | Limit Value   |
|--------------------|---------------|
| Frequency shift    | F/FO≤±0.3%    |
| Resonant Impedance | <b>Z</b> r≤5Ω |

Note: The limits in the above table are referenced to the initial Measurements.

- 7. 7.1 **NOTICE**
- Ceramic R<sub>esonator</sub> should be stored in storeroom. And the surrounding atmosphere is acid less, alkali-free and no other harmful impurity.
- The package for ceramic damage. 7.2 7.3
- This specification limits the quality of the component as a single unit. Please make sure that the component is evaluated and confirmed the drawing When it is mounted to your product.
